KAFFIBRE® consists of 15-20% water-soluble and 80-85% water-insoluble fibres.

Exfoliating, or the removal of dead skin cells from the outer layer of the skin, can be done mechanically or chemically. The main mechanism of exfoliation by KAFFIBRE® is mechanical, with the firm particles of KAFFIBRE® scrubbing the skin. Furthermore, KAFFIBRE® still contains some caffeine (1%), which is proposed to have anti-cellulite properties². Caffeine has shown to reduce the accumulation of fat in cells³.
